

ABHISHEK KULKARNI

Senior SDE (Java, Cloud, Kubernetes)

☎ +91 7756806941 ✉ kulkarniabhishek159@gmail.com 🌐 <https://www.linkedin.com/in/abhishek-kulkarni-devops>

Profile Summary - Senior SDE (Java, Cloud, Kubernetes)

Senior Java Backend / Platform Engineer with 6+ years of experience building scalable microservices, API platforms, and cloud-native systems using Java, Spring Boot, and Kubernetes. Proven expertise in Spring 6 / Jakarta EE migrations, contract-driven APIs, CI/CD automation, and DevSecOps, with strong production ownership in high-availability environments.

Work Experience

Veritas Technologies (Now Cohesity)

Jan. 2023 – Present

Software Engineer III (Java, Distributed Systems, Cloud-Native Platforms)

Pune, Maharashtra

- Led the **architecture and development of scalable Java & Spring Boot microservices**, focusing on **high availability, performance optimization, and clean domain-driven design**.
- Designed and implemented a **custom API request validation framework** using annotations, interceptors, and centralized mappings, **eliminating duplicate validation logic** and improving consistency across services.
- Spearheaded the **Spring Framework upgrade to 6.x (javax → jakarta)**, modernizing the platform and **remediating 80% of reported security vulnerabilities** without service downtime.
- Designed **RESTful APIs compliant with HATEOAS and JSON:API standards**, ensuring **backward compatibility, extensibility, and contract stability** across dependent services.
- Built and maintained **CI/CD pipelines using Jenkins, Helm, and Kubernetes**, enabling **automated, zero-downtime deployments** and improving release reliability.
- Owned **production support and on-call rotations**, directly handling **customer-impacting incidents**, root-cause analysis, and post-incident fixes to maintain high system uptime.
- Performed **deep log analysis and performance debugging**, proactively identifying bottlenecks and **reducing recurring production issues** through preventive fixes.
- Implemented **end-to-end observability** using **Prometheus and Grafana**, defining service-level metrics, alerts, and dashboards to improve system reliability and MTTR.
- Collaborated closely with **Product, QA, and DevOps teams** to translate business requirements into **robust technical solutions**, consistently delivering high-quality releases under tight timelines.

Ness Technologies

Mar. 2022 – Jan. 2023

Software Engineer (Java Backend)

Pune, Maharashtra

- Contributed to the **design and development of Java & Spring Boot microservices**, helping establish the **foundational backend architecture** for core product capabilities.
- Built and maintained **RESTful APIs and shared internal frameworks**, enabling rapid feature development while maintaining consistency and code quality.
- Performed **defect resolution, log analysis, and performance tuning**, ensuring **stable, production-ready releases** and adherence to service SLAs.
- Actively participated in **on-call rotations and customer issue resolution**, improving incident response times and overall system reliability.
- Following the **acquisition by Cohesity**, continued in the same role with **expanded responsibilities**, contributing to **platform modernization and integration initiatives**.
- Worked as a **Software Engineer embedded with the Veritas Technologies engineering team**, contributing directly to product development in a **client-owned codebase**.
- **Recognized for technical excellence and collaboration**, resulting in a **direct full-time offer from Veritas Technologies** to join their core engineering team.

Tata Consultancy Services

Feb. 2020 – Feb. 2022

System Engineer – Java Developer

Pune, Maharashtra

- Developed **RESTful APIs using Java 8 and Spring Boot** within a microservices architecture, following Agile practices and established engineering standards.
- Implemented **Java-based modernization solutions to replace legacy COBOL functionality**, improving long-term maintainability and reducing technical debt.
- Improved **unit test coverage using JUnit and Mockito**, strengthening code reliability and reducing regression issues.
- Maintained high code quality by addressing **SonarQube-reported bugs, vulnerabilities, and code smells** as part of Jenkins-driven CI workflows.
- Debugged and supported applications deployed on **AWS**, leveraging **CloudWatch logs** for issue investigation and root-cause analysis.

Education

Kolhapur Institute of Technology
Bachelor of Mechanical Engineering

July 2015 – May 2019
Kolhapur, Maharashtra

Projects

Spring Framework 6.x Migration & Platform Modernization

- Led the **end-to-end migration of multiple production microservices from Spring Framework 5.x to Spring 6.x (Jakarta EE)**, modernizing the backend platform and **remediating 80% of legacy security vulnerabilities**.
- Refactored application components to support **Jakarta namespace changes**, ensuring compatibility with updated Spring Boot, Spring MVC, and dependency stacks.
- Coordinated with **QA, DevOps, and release teams** to implement **automated testing, CI/CD readiness, and phased rollouts**, achieving **zero/minimal production downtime** during migration
- Ensured container compatibility by validating services in **Docker-based deployment environments**, maintaining deployment consistency across environments.

API Standards Framework & Contract-Driven Development Platform

- Designed and implemented a **custom API framework from scratch** to build **HATEOAS- and JSON:API-compliant REST services**, ensuring consistency, extensibility, and long-term contract stability.
- Built core framework components including **JWT-based authentication, URL filtering, request validation using interceptors, pagination, dynamic data filtering, and centralized response builders**.
- Developed **abstract contract-based unit test suites** to automatically validate synchronization between **OpenAPI (Swagger) specifications and actual API responses**, preventing contract drift.
- Enabled **contract-first API development**, improving API reliability, backward compatibility, and consumer trust across services.
- Created **AI prompt templates integrated with GenAI tools (e.g., Copilot)** to **generate APIs in bulk** using the standardized framework, significantly accelerating development and reducing boilerplate effort.

Monolith Containerization & Kubernetes CI/CD Platform

- Containerized a **Java (Gradle-based) monolithic application**, authoring **production-grade Dockerfiles from scratch** to enable consistent, environment-agnostic deployments.
- Deployed the containerized application on **Kubernetes clusters across on-prem (kubeadm) and AWS EKS**, ensuring portability and reliability across hybrid environments.
- Designed and implemented a **secure Jenkins CI/CD pipeline for IT Analytics (ITA) deployments targeting on-prem Kubernetes infrastructure**.
- Automated end-to-end deployment workflows using **Ansible playbooks integrated with Jenkins pipelines**, eliminating manual intervention and improving deployment consistency.
- Integrated **DevSecOps practices**, including **pre-deployment security scans**, improving deployment security posture and compliance.
- Reduced overall **deployment time by 50%**, while improving reliability and repeatability of production releases.

Technical Skills

* Java	* Shell/Python Scripting	* Containerization	* Infrastructure as code
* Spring-boot	* Kubernetes	* Agile methodology	* Cloud Configuration
* Microservices	* Security and Compliance	* AWS Cloud Services	

Acheivements

- Certified Kubernetes Administrator (CKA-2024).
- WOW award for developing CI/CD pipeline for deploying ITA (IT Analytics) on an on-prem Kubernetes environment using Ansible playbook.
